OBJECTIVE

- A fourth-year Computer Science student aiming to get a Software engineer, ai, or automation Internship , where I can solve real-world applications using my background in information processing and further strengthen my development and problem-solving capabilities.

EDUCATION

Bachelor of Science in Computer Science **University of the Philippines, Los Baños**

Applying data structures and algorithms to develop scalable applications across diverse technology stacks. Integrating Generative AI technologies, including OpenAI APIs and Retrieval-Augmented Generation (RAG), with Python and FastAPI to build intelligent dashboards that address operational bottlenecks. Continuously learning through feedback and communicating ideas and solutions clearly and effectively.

WORK EXPERIENCE

Center for Enterprise Data and Analytics, AI Intern at Bank of the Philippine Islands (BPI) **July 2026 – Present**

- Built an automated Lead ranking tool using n8n that outputs a ranked list of leads with a next best action recommendation for the relationship manager. Reducing failed lead targeting and scaling reach.
- Built an automated thin-file credit decisioning platform with applicant and loan officer portals, orchestrating document extraction and decisioning workflows to flag risks, support document review, and recommend credit decisions.
- Served as a batch representative, facilitating communication between co-interns and mentors, effectively conveying concerns, updates, and feedback.

Computational Interdisciplinary Research Labs Intern (CINTERLabs) **June 2026 – July 2026**

- Developed a citrus tree detection model using Slicing Aided Hyper Inference (SAHI) to automate tree counting from aerial imagery and support agricultural research..
- Built an interactive dashboard to streamline the preparation and processing of GeoTIFF files, reducing the need for manual tree tracing and improving researchers' workflow efficiency..

ACADEMIC PROJECTS

University Student Accommodation Management System (USAMS) **2nd quarter 2026**

usams.services

- Student Accommodation Tracker aims to streamline the application, allocation, monitoring, and management of student housing, ensuring efficiency, and proper documentation of accommodation-related transactions.
- lead a team of 13 students using an Agile project management framework, Scrums.
  Using: Github project as story, sprint, and scrum tracker dashboard.
- In addition to being the project manager, I was a part of the Frontend where I mainly focused on handling the student dashboard, browsing UI and sign in/registration flow.

Complete LOLCODE interpreter **2nd quarter 2025**

LOLCODE Interpreter

- Developed a complete interpreter with a graphical user interface, implementing lexical analysis, recursive descent parsing, and an execution engine.

LEADERSHIP & ACTIVITIES

Alliance of Computer Science Students, Academic Affairs Comittee member(ACSS) **April 2023 – Present**

- Organized and facilitated supplementary academic tutorials covering both technical and theoretical concepts to support members in their coursework and strengthen their understanding of core topics.
- Developed and maintained small-scale software projects for internal organizational use, applying software development practices to address organizational needs and improve workflows.
- Coordinated with external companies and industry partners regarding project collaborations, sponsorships, and other organizational initiatives, strengthening professional communication and stakeholder engagement.

APRU Tech Policy Hackathon (2nd-stage) **2025**

- Creating tech-driven process improvements and regulatory innovations using AI and data science. Mainly focusing on Financial Inclusion, Interoperability & Trust, AI-Driven Economies, and Digital Equity & Trust.
